1. Solve the questions asked in midsem. Write programs to solve them.
2. Design a spell correction model. spell-errors.txt file consists of a correct word and the possible errors such as raining: rainning, raning. You are provided with the count_1edit.txt file that consists of possible errors in 1 edit distance. Similarly use the counts or frequencies of the words in count_unigram.txt file. Use a noisy channel model for finding the correct word from an incorrect word. Find the accuracy of your spell checker. [You will find all files in the Spell-Correction folder.]
